The company

The company

Twenty years of experience, passion and dedication to give value to a highly specialized production process.

Faber is one of the major European manufacturers of pod coffee machines, a point of reference for roasters and operators in the sector.

In recent years we have also successfully entered the B2C market.

Faber coffee machines are proudly made in Southern Italy. The design, the choice of materials, the making and turning of the components and finally the assembly are carried out in the Caserta plant, making the entire product range completely Made in Italy, a guarantee of quality recognized worldwide. In sharp contrast to the socio-political scenarios of our country, Faber believes investing in Southern Italy is a winning bet!

The innovative project "Officina di Faber" has strengthened the structure of the brand, consolidating the principles that inspire it: modernization, development and research, cutting-edge marketing, uncompromising quality standards and above all obsessive attention to detail.

In sharp contrast with the socio-political scenarios of our country, we think that investing in our land is a winning bet!

Our story starts from a small garage and from the intuition of a man who carried forward his

ingenuity and his vision thanks to which he created what is today an important reality in the coffee machine sector.

Alfonso Teti is a mechanical enthusiast and a profound connoisseur of the coffee market. By merging these two elements and driven by the strong belief that the future of coffee enjoyment is in pods, Faber was born (initially for the exclusive service of the vending and Ho.Re.Ca sector).

Keywords: groove, innovation, amusement and professionalism.

For Faber, professionalism comes first and foremost, and this is demonstrated by the passion in cultivating commercial relationships by making effective and efficient customer care available to its customers, in protecting and favoring loyal affiliates but above all in aiming to strengthen the principles of Industry Modern.

Gamma Pro

DELUXE • MINI DELUXE • TOTAL INOX

Gamma Pro

A Faber is forever!

Creativity and meticulous handmade mechanical engineering merge with the exclusive use of worthy and solid materials like brass, copper, and stainless steel.

The craftsmanship makes each product in the Pro range unique.

The essential and solid design is designed to last in time. The steel frame and metallic finishes capture and reflect the light, without hiding rather highlighting the welds or any imperfections in the paint. Not a production flaw but the sign that Faber coffee machines are the result of careful and meticulous handmade workmanship.

The Pro range consists of the series:

Total Inox;
Deluxe, available in 9 colours;
Mini Deluxe, available in 5 colours.

All the machines in the Pro Range (with the exception of the Mini Deluxe) are available in the Basic version or in the Zodiac equipped version.

Gamma Ho.Re.Ca.

AGENTA 2.0 • AGENTA 1.0 • MINI AGENTA

Agenta 2.0

A coffee machine with superior aesthetics.

From the union of noble materials such as steel, wood and brass, Agenta is born, a semi-professional machine equipped with two dispensing groups dedicated to the Ho.re.ca sector.

The result of intense research into design and a careful study of shapes, it is aimed at those who are not forced to choose between aesthetic qualities and high performance.

Furthermore, thanks to the Electronic System, you no longer have to worry about anything: the integrated electronic board, in fact, allows you to guarantee maximum performance thanks to the Long/Short Coffee dispenser.

The cup warmer compartment, capable of holding up to 12 cups, manages to combine the right compromise between made in Faber quality, an elegant design and the practicality of a machine intended for the HO.RE.CA sector.

Equipped with a 0.8 l boiler for 2500 W, it guarantees high performance just like a real Barista. Like the latter, it is available in several versions which basically concern the dispensing system:

- ONE OR TWO POD GROUPS
- HYBRID

for those who don't want to choose between the quality of a Faber group and the new Dolce Gusto® system.

A coffee machine with superior aesthetics.

L'Officina di Faber

CONCEPT INDUSTRIAL

L'Officina di Faber

Concept Industrial is a return to the origins, which reveals the beauty and essentiality of the mechanics, the quality of the materials and the solidity of the structure

Mechanisms, springs, bolts and internal tubes highlight the rough air of a resistant and performing machine but with a style that is never predictable.

Born in 1950 in post-war New York, the Industrial style begins to emerge precisely from the need to find new low-cost homes by reusing run-down spaces.

From all these characteristics are born the creations of L'Officina di Faber and its spearhead the Concept Industrial: the perfect union between essential lines and functionality.

The machines of the Industrial series quickly made a name for themselves on the interior design scene. Thanks to their strong and distinctive character, they quickly became a trend icon.

Authenticity, eccentricity and refinement are the strengths of our Industrial creations, which guarantee a strong stage presence, resistance and high performance for a coffee at home just like at the bar.

The Industrial line offers coffee machines conceived as a piece of furniture, in the version with one or two dispensing groups.
